WHAT DO WE KNOW ABOUT IMMORTALITY?

We can be certain that the body does not survive death. Once the heart stops circulating blood, the brain is no longer nourished, and begins to decay. On the basis of medical evidence it would seem that, within a quarter of an hour, the personality is irreparably destroyed and the individual ceases to exist. But now there is mounting scientific evidence for a life after death.

This book is the result of extensive interviews of over 1000 doctors and nurses who have been present when cases of "post-mortem existence" have occurred. Extensive computer analyses of their observations have been made. Now they are reported in the first truly scientific investigation of the experiences of the dying at the hour of death.

What these doctors and nurses have witnessed cannot be explained away by medical, psychological, cultural, or other conditioning. Yet it may answer the fundamental question of human existence—

IS THERE LIFE AFTER DEATH?

Finally a book that probes death and dying with modern research techniques. Osses and Haraldsson present compelling evidence that the deathbed is the gateway to another existence. The visions of the dying appear to be not hallucinations but glimpses through the windows of eternity. *Ann Vaughan, Editor of NEW REALITY MAGAZINE*

A major contribution to the scientific study of the question of postmortem existence. *Raymond A. Moody, M.D., author of LIFE AFTER LIFE*
