

Machine Design

PAUL H. BLACK

Professor of Mechanical Engineering
Ohio University

Second Edition

ASIAN STUDENTS' EDITION

McGRAW-HILL BOOK COMPANY, INC.

New York Toronto London

KŌGAKUSHA COMPANY, LTD.

Tokyo

CONTENTS

PREFACE	v
CHAPTER 1. Introduction	1
2. Machine-design Computations	5
3. Loading, Induced Stresses, and Failure	10
4. Stress Concentration in Machine Members	31
5. Allowable Stresses	52
6. Members That Fail by Buckling	61
7. Engineering Materials	71
8. Mechanical Fabrication and Processes	91
9. Detachable Fastenings	122
10. Springs	146
11. Pressure Cylinders	169
12. Translation Screws	173
13. Shafting	184
14. Belt Drives and Hoists	192
15. Power-transmission Chains	213
16. Shaft Couplings	224
17. Clutches and Brakes	231
18. Spur and Parallel Helical Gears	251
19. Gears for Nonparallel Shafts	278
20. Surface Finish, Friction, and Wear	297
21. Sliding Bearings and Lubrication	313
22. Rolling Contact Bearings	338
23. Metal Fits and Tolerances	353
24. Vibration and Vibration Control	361
25. Motor Selection	376
APPENDIX I. ASA Abbreviations	383
II. Elements of Sections	384
III. Bending Moment and Deflection Formulas	385
IV. Values of $\sigma^2/16$ and $\sigma^2/32$	390
V. Properties of Materials	387
VI. Tensile Strength and Yield Point versus Brinell Hardness	388
VII. Endurance Limit versus Tensile Strength	388
