CONTENTS
PART ONE
INTRODUCTORY

Chapter I. Automatic and Semi-Automatic Lathes, General Aspects

§ 1.	Concise Review of Machine Tool Development in Russia	9
§ 2.	Fundamentals of Metal-Cutting Machine Tool Automaticity	11
§ 3.	In What Ways the Operation of Semi-Automatic and Automatic Lathes Differs from That of Engine and Turret Lathes	13
§ 4.	Classification of Automatic and Semi-Automatic Lathes and Their Fields of Application	19
§ 5.	Principal Types of Single-Spindle Automatics	23
§ 6.	Principal Types of Multiple-Spindle Automatics	24
§ 7.	Principal Types of Single-Spindle Semi-Automatics	30
§ 8.	Principal Types of Multiple-Spindle Semi-Automatics	32
§ 9.	Machine Tool Handling and Maintenance	36
§ 10.	Machine Tool Model Designation	37

Chapter II. Drives and Other Typical Mechanisms

§ 11.	Classification of Motions in Machine Tools	37
§ 12.	Principal Units	41
§ 13.	Drives and Power Transmission	41
§ 14.	Belt Drives	42
§ 15.	Chain Drives	45
§ 16.	Toothed Gearing	46
§ 17.	Mechanisms for Converting Rotary Motion into Rectilinear Reciprocating Motion	50
§ 18.	Cam Mechanisms	51
§ 19.	Camshafts	55
§ 20.	Mechanisms for Periodic (Intermittent) Rotation	57
§ 21.	Locking	59
§ 22.	Engaging and Disengaging Mechanisms	62
§ 23.	Speed-Changing Elements	66

Chapter III. Electric and Hydraulic Drives

§ 24.	Electric Drives and Electric Motors	69
§ 25.	Electric Control Devices	70
§ 26.	Electric Tracer-Control Units	74
