OLYMPUS  
OM-2

# The body with soul.

It's the body inside the OM-2—the essence of OLYMPUS multi-area vision. This truly electronic camera centralizes all exposures, considers focus when and where they really matter. At the film plane during the exposure. The ultimate result is untraditional photographic accuracy that what you'd expect from the ultimate 35mm SLR.

The spirit of the OM-2 is TTL. Direct "On-the-Film" Light Measuring. Just shoot it as when you're the right amount of light splashes across the film, the shutter closes automatically.

So exposures are perfect. With any lens. At any aperture.

No matter what the challenge, the multi-automated OM-2 is in charge. Photos are flawless. Even when light changes dramatically while recording pictures at five frames per second. Match it with the T35 Bolt and again you'll discover how perfect the body can be. Since the length of bolt is determined by the camera itself, the OM-2 actually cuts the light off at the precise microsecond that the right exposure is achieved. It's virtually mistake-

proof. The choice for type or pro. For long exposures, macrophotography and photomicrography.

See your pictures come to life with the OLYMPUS OM-2. It's all that an electronic 35mm SLR should be. Buy it now!
