COMPUTERS AND COMMONSENSE

Fourth Edition

by
ROGER HUNT and JOHN SHELLEY
Imperial College, London

The book is aimed at the general reader with no prior knowledge on the subject seeking an entry into the world of computers. It provides the reader with the basic structure and concepts of a computer as well as brings him *ad par* with the current state of the art.

Features of this edition :

- A new section on microcomputers, their development, impact on various aspects of society and future trends in this area.
- New chapters on computer networks and the DP department.
- Revised updated sections on human-computer interaction and the latest application areas of Artificial Intelligence and Desk Top Publishing.
- Appendices covering the development of computer programming languages and decision tables.
