Mathematician's Delight

This volume is designed to convince the general reader that mathematics is not a forbidding science but an attractive mental exercise. Its success in this intantion is confirmed by some of the reviews it received on its first appearance:

'It may be recommended with confidence for the light it throws upon the discovery and application of many common mathematical operations' -
The Times Literary Supplement

'It jumps to life from the start, and sets the reader off with his mind working intelligently and with interest. It relates mathematics to life and thought and points out the value of the practical approach by reminding us that the Pyramids were built on Euclid's principles three thousand years before Euclid thought of them' -
John O' London's

'The writer clearly not only loves his subject but has unusual gifts as a teacher . . . from start to finish the reader, whose own interests and training may lie in very different fields, can follow the thread' - *Financial News*
